

Bluestock MF — Final Report

Project README:

Mutual Fund Analysis — India

End-to-end data pipeline and analysis project covering 20 AMFI-registered mutual fund schemes across 10 fund houses. Built using Python, pandas, and live data from mfapi.in.

What this project does

- Pulls live NAV data for 6 large-cap schemes directly from the MFAPI
- Loads and validates 10 structured datasets covering fund metadata, NAV history, portfolio holdings, SIP records, returns, AUM, expense ratios, fund managers, benchmarks, and risk metrics
- Validates AMFI scheme code coverage across datasets
- Lays the groundwork for returns analysis, risk profiling, and fund comparison

Project structure

```

mf\_analysis/

■ ■ ■ data/

■ ■ ■ raw/ # source CSVs — generated + live fetched

■ ■ ■ processed/ # cleaned/transformed data (future)

■ ■ ■ notebooks/ # exploratory analysis

■ ■ ■ sql/ # queries for structured analysis

■ ■ ■ dashboard/ # visualisation outputs
